

FastGate™

Access Control System

Advanced Detection Technology's FastGate™ Access Control System is an extremely flexible system designed to allow secure entry and exit using a wide range of technologies including RFID, biometrics, physical barriers, gates, bollards, LPR technology, under vehicle inspection, document scanning, customized software, and/or security cameras. FastGate™ units can be engaged for perimeter security, facilities security, or customized for any access point.

FastGate™ is an adaptable access control system that can be configured to meet a wide variety of customer needs.

- > > Identify people and vehicles at any access point using a wide variety of access control technologies
- > > Monitor status of any facility by internet
- > > On-screen notifications sent to control center location, includes acceptance/denial notices and alarms
- > > Information connected to database, allows for real-time access of records and detailed reports
- > > Fully upgradable, modular system in response to ever changing security needs

FASTGATE™ BENEFITS

Integrated System. All FastGate™ system components are complementary and designed to share information.

The modules are "plug and play," providing automatic coordination of information.

Near or Remote Operation. FastGate™ enables all access control points to be monitored up to 5 miles from critical entry points.

Extremely Flexible. Fastgate™ elements can be customized for any facility or perimeter security needs.

Ease of use. Ten minute on-screen training tutorial. Standard keyboard, mouse, single button, or simple switches control all functions.

Ease of Maintenance. Any damaged system component can be unplugged and replaced while the other modules continue to function.
